Project Part 2

Due date
Sat 4th March before 11:30 PM

Requirements

1. In this part, you will create the *Products* page, which will contain a grid displaying all the products/services available in your online store.

2. Your product page must display between 15-20 products, with 2 - 3 products displayed per row.

3. Each product must have its own sectional component containing multiple pieces of information describing it. Use a grid for each product section to display the following information:

    a. The product name

    b. Product description

    c. A thumbnail image

    d. The price of the product

    e. The rating in stars.

4. Styling is left to you, but it must always fit within the page limits, be visually appealing, and appropriate for the purpose.

Note: you are supposed to have already created styles of the common parts of the page such as the page header, nav, and footer. These styles must be uniform across all pages of the website.

Submission

*   Zip the whole folder containing all your website files (including HTML files, style sheets, and image files) as a *.zip* not as a *.rar* and submit to the drop box on D2L.
